Dear Tim,

I'm sorry for the delay, but now we've read the draft review report. Though the parts covering the detailed review of the corrosion of LOT as well as the Minican reflects the discussions at the review meetings quite well, we can't find the more general conclusions drawn on the SKB corrosion programme well underbuilt by the review of these two experiments.

I have summarized our comments in the attached document. As you can see from the two other documents, I have also asked both Ola Karnland and Nick Smart to contribute with their own comments.

Please let me know if you have any further questions or comments to our comments.

Best regards,  
Christina
