Ämne: QA meeting regarding Minican och LOTA2 experiments

Hej Christina

I hereby confirm the suggested dates for the QA review of Minican March 10th and follow-up questions of LOTA2 March 11th. From SSM point of view it is preferable if we could start the meeting at 9.00 at SKB, both March 10th and 11th. From SSM will except from myself also Tim Hicks and Tamara Baldwin (Galson-sciencies) participate. Suggested agendas for these two meetings are;

March 10th

1. Presentation of participants.
2. Overview of other ongoing copper corrosion tests and plans for future tests, SKB
3. Position of Minican experiments within SKB plan of understanding copper corrosion.
4. The objectives of the Minican experiment, SKB.
5. Presentation of Minican experiments by SKB.
6. Questioning by Galson, QA checklist.
7. Any other issues.

March 11th

1. Presentation of participants.
2. Presentation of the measurement techniques used to determine the extent of corrosion observed on the coupons, Rosborg
3. Extent of corrosion on the central heated copper tube, Rosborg
4. Questioning by Galson, QA checklist and open questions from QA review 1st December.
5. Any other issues

Regards

Jan
